Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The closest prior art, Tani et al. (US 5,756,628), discloses materials made by reacting organosilanes with titanium alkoxides to form phyllosilicates. The resulting structures have tetrahedral layers and octahedral layers, where the metal atoms are silicon and titanium. Titanium alkoxides are used in molar ratios up to 2:1 when compared with the organosilanes to form 1:1 structural layers. However, the reference teaches that alkaline catalysts are used to hydrolyze the titanium alkoxides for reaction with the organosilanes, also teaching that the titanium alkoxides are highly reactive. Thus, the reaction product would not contain unreacted titanium alkoxide in the amount specified by the applicant. It is the examiner's position that the inclusion of additional titanium alkoxide with the structural composite material to form a paint represents a novel and unobvious step over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
